EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Terry Clark on October 1, 2007.

The application has been amended as follows:

Claims 1-4, line 1: Change "recording medium" to --computer-readable medium--.

Allowable Subject Matter

2. Claims 1-14 are allowed.

3. The following is an examiner's statement of reasons for allowance: Prior art fails to teach or suggest an a computer readable medium having a data structure for managing presentation duration of still images, comprising: a management information area storing management information for the still picture stream, said management information having sequence information to divide said still picture stream to logical sequences based on the still picture having infinite presentation duration.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

4. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

a. Ando et al. (U.S. Patent 7,054,545) discloses in Fig. 47 a maximum and minimum duration time for still images, wherein the maximum and minimum duration times can be finite and infinite (col. 39, lines 38-59).

b. Roth et al. (U.S. Patent Application Publication 2003/0190158) discloses the DVD-Video specification, for example, supports two types of still image presentations: slide shows, using finite cell still or a finite presentation time in which the duration of each image is predetermined, and still shows, using infinite cell still or VOBU still in which user input controls the timing of the progression from one image to the next (paragraph [0009]).

c. Kato (U.S. Patent Application Publication 2005/0201718) discloses that with the browsable slide show, the replay sequence is predetermined, and the replay time of the respective slides is finite or infinite. If a given slide(s) has infinite replay time, the replay does not proceed to the next slide, except if the user commands a reproducing apparatus (player) to go on to the next slide. Consequently, the respective slides are not reproduced at preset timing on the time axis. If, in the browsable slide show, the audio data is reproduced

simultaneously with the still picture, audio data is not synchronized with the replay of the still pictures (paragraph [0071]).
